## PROFESSIONAL SUMMARY

Software Analyst and Developer with 5+ years in the IT field, progressing from infrastructure management and platform administration into full-stack development. Skilled in C#, .NET MVC, Angular, and JavaScript — with hands-on experience in modern frontends (Astro, Blazor, jQuery) and enterprise platforms like ServiceNow and Dynamics Navision. That IT background gives a practical edge: able to own a project from requirements through deployment, and equally comfortable maintaining and improving legacy systems.

## PROFESSIONAL EXPERIENCE

**Software Analyst** | Industrias Pacer | Torre 101, SPS
*2024 – Present*

- Develop and maintain full-stack solutions using C# / .NET MVC Framework, building backend logic, REST API integrations, and frontend interfaces with Astro, Blazor, and jQuery.
- Design and implement system integrations and custom APIs, connecting internal platforms and ensuring reliable data flow across business processes.
- Maintain and refactor legacy .NET applications, improving code quality and long-term supportability while keeping existing systems stable for end users.
- Support and extend Dynamics Navision ERP, troubleshooting issues and delivering enhancements for 50+ internal users.

**Technical Consultant** | Altiatek LLC | Altia Business Park, SPS
*2023 – 2024*

- Developed and executed comprehensive IT strategies and solution architectures aligned with client objectives.
- Administered the ServiceNow platform end-to-end — reports, business rules, and client scripts (AngularJS / JavaScript) improving incident resolution workflows.
- Led remote customer service operations and managed a high-performance team, promoting a collaborative and results-oriented work environment.
- Created, managed, and implemented custom integrations based on client needs assessments, ensuring efficient resource allocation.

**IT Manager** | Feyco Hardware Store | Bo. Medina, SPS
*2021 – 2023*

- Managed full IT budget and infrastructure including Windows servers, Fortinet firewalls, software licenses, and integration projects.
- Deployed Lynx HR managment platform (2022), streamlining HR operations and reducing manual administrative overhead by an estimated 30%.
- Implemented BeeTrack for logistics tracking (2023), reducing route gaps and improving delivery efficiency across hardware distribution operations.
- Maintained network equipment and ensured 99%+ uptime across hardware and software environments for a 30+ employee organization.

## KEY PROJECTS

**Lynx HR Management Platform** — *2022*
Implemented and configured the Lynx HR managment platform at Feyco, digitizing HR workflows and reducing manual administrative overhead across a 30+ employee organization.

**BeeTrack – Logistics Tracking** — *2023*
Deployed BeeTrack for route optimization and logistics tracking at Feyco, eliminating route gaps and improving delivery efficiency for the hardware distribution operation.
